Brand New Book ***** Print on Demand *****.Excerpt from Canada Medical Record, Vol. 22 In many cases, club-hand is associated with club-foot, or some other abnormality of development. The direction of the deformity may be either in flexion, extension, abduction and adduction, or a combination of the two, the most frequent being the radio-palmar variety. In those cases where all the bones of the hand and forearm are present, the prospects of a good result are more favorable than where there is absence of one or more bones, and in these milder cases, when seen early, it is sometimes possible to restore the hand to proper shape and function by constant manipulation and rotation of the parts, which are to be held in their improved position by some fixed dressing, as the plaster-of-Paris bandage, the dressing being changed from time to time as the deformity is reduced. Section of the tendons, ligaments or fascia may be necessary if the case is not seen in the early stages. Many of these structures are so situated as to make open section preferable to the subcutaneous method;...
